

Visions of a Nordic "equilibrium economy" in retrospect and today
Jan Otto Andersson, Åbo Akademi

From the 1970s interesting books and pamphlets on the possibility for red-green Nordic visions were published. They envisaged a post-capitalist red-green Nordic future with among other features a citizen's wage. I will also present some work on the Nordic social and economic policy models with less futuristic ambitions, as well as more recent Nordic works on degrowth.
